

**Dear xAI Team,**

I built [michaelforxai.com](https://michaelforxai.com) over the weekend as my application—a working demo of AI-native interface patterns I prototyped in React/TypeScript. The Kanban board showcases concepts like dynamic UI that adapts to model outputs, multi-modal response handling, and agent coordination interfaces. It's proof of the speed and hands-on approach I'd bring to xAI.

My background: 5+ years designing at scale for King (Microsoft) and Ubisoft—redesigning Candy Crush's onboarding for 1M+ new players/day (+5% retention, +3% revenue), creating AI-powered tools that boosted team efficiency 25%, and scaling ChatGPT adoption to 90% org-wide in 60 days. These experiences taught me to ship both delightful consumer products and powerful AI-native workflows.

What excites me about xAI goes beyond the product opportunity—it's building AI that expands human understanding through maximally truth-seeking design guided by first principles. That mission alignment, combined with my curiosity and bias for shipping, is why I'd thrive on your team.

Best, Michael Chiu
